LEAVE NO TRACE PLAN

Artist Summary

Concept Artist: Christine Irving
Email: christine (dot) irving (at) gmail (dot) com
Location: Toronto, Ontario
BM Community: Toronto, BurnT
History: 9 Years at Burning Man and 2 years as co-lead for Toronto Decompression (TComp)

Leave No Trace Plan

If trenching is required for wires we will lay rope over the wires to reduce the amount of playa we need to dig up during clean up. As our flame effects are similar and inspired by the Burninator for standalone components, the cleanup will be straight forward:

- No residue from the flames will ever touch the playa
- The only damage to the playa will be from (1) the minimal narrow trench made for the wire (only if required) and (2) 5 posts secured by 4' rebar; the trenches and posts will be filled and compacted completely
- All other materials can be broken down simply and will be removed
- Dust mounds are raked and dispersed
- The greywater will be dispersed carefully so as not to make marks or transported out
- The area will be 'moop'ed and inspected for wire, zipties, etc.
- Solar power will be used to charge the 12v batteries so there will be no generators to manage or clean up

We will update our leave no trace plan during the summer and post playa.
